STOCK MAINTENANCE

Stock maintenance is an interface b/w the customer and sales person. It aims at improving the efficiency in maintaining the stocks.

The entire process of stock maintenance is done in a normal manual manner considering the fact that the number of customer for purchase is increasing every year, a maintenance system is essential to meet the demand.

* The system used by 3 people
Market data provider, customer, sales person

* Market data provider is the one who analyses the product and distributes the news

* The customer is the one who takes order of products

* Sales person is the one who maintains the stock details

→ Overall description:

It will describe major role of the system components and interconnection

→ Specific requirements:
