College Information System

The main objective of our product is to maintain information about students, results employees and other activities like attendance, student results fee payment and salary payment etc. The information is stored for later making in the future for a business process with an organization

The system has 3 types of users: Admin, lecturers, student

*** Admin:**
There are the people who play important role in modification of subjects, uploads results, modification of subjects and many other. They are helpful in managing the website. UI and database of students, employees.

*** Lectures:**
There are the people who creates classes for their respective department and updates in certain link. So that students will join through that link to attend online class. They can maintain the attendance database of students for future reason

mut

Students:

They are people who will search for their respective results within the webpage. They even have access to articles and other research paper using suitable credentials. Student can view results and gain touch with admins or lecturers for further query
